Data & Analytics: Data Analysis • Root-Cause Analysis • Data Quality • Data Validation • Exception Management • Reconciliation • Reporting Automation • Data Visualization

Technology: Python • SQL • R • Excel • Power BI • Tableau • Relational Databases • Bloomberg Terminal • Bloomberg API

Financial & Investment Data: Security Master Data • Securities Pricing • Corporate Actions • Portfolio Valuation • Equities • Fixed Income • Derivatives

PROFESSIONAL EXPERIENCE

Independent Financial & Data Analytics Projects | Pittsburgh, PA | 2021 – Present

- Develop Python and SQL applications for financial analysis, data processing, reporting automation, and data-quality validation.
- Design relational databases and data workflows to collect, organize, reconcile, and analyze financial and market data.
- Build analytical tools and automated processes that identify missing data, anomalies, exceptions, and other data-quality issues.
- Continue professional development in software engineering, data analytics, business intelligence, and applied AI technologies.

Team Lead – Corporate Actions & Pricing Operations | BNY Mellon Middle Office Operations, Pittsburgh, PA | 2018 – 2021

- Continued full management responsibility for the Corporate Actions & Pricing team, including hiring, training, coaching, performance evaluations, workload management, and daily operational oversight.
- Led corporate actions, securities pricing controls, portfolio valuation support, data validation, and reconciliation processes across multiple asset classes.
- Played a key role integrating other North American investment-management boutiques onto Mellon Capital platforms, migrating accounts and harmonizing procedures, workflows, and operational controls.
- Partnered with technology, accounting, portfolio management, and operations teams to resolve complex data and process issues and standardize workflows across the consolidated organization.
- Produced recurring operational and management reporting supporting risk monitoring, pricing quality, portfolio operations, and senior management decision making.
- Implemented paperless pricing and corporate action workflows, supporting business continuity and the rapid transition of the team to remote operations during the COVID-19 pandemic.

Manager – Corporate Actions & Pricing Group | Mellon Capital Management, Pittsburgh, PA | 2011 – 2018

- Promoted to manage the Corporate Actions & Pricing Group, with responsibility for department operations, personnel, controls, and service delivery.
- Hired and trained a team of five associates; provided ongoing coaching and conducted formal mid-year and year-end performance evaluations.
- Transitioned numerous department functions to a four-person support team in Pune, India, and led recurring meetings to oversee workload, quality, and issue resolution.
- Established and maintained department procedures and controls to improve efficiency, reduce processing risk, and lower costly operational errors.
- Collaborated with technology teams to automate manual processes, define business parameters, test changes, and support deployment to production.

- Reported department performance and initiatives to senior management and met regularly with stakeholders across the firm to address operational concerns.
- Responded to client questions involving market activity, asset pricing, and accounting irregularities and met with prospective clients to explain department structure, policies, and procedures.

Senior Data Management Specialist – Corporate Actions & Pricing | Mellon Capital Management, Pittsburgh, PA | 2005 – 2011

- Maintained the integrity of financial data supporting portfolio management, performance, and accounting functions across institutional investment portfolios.
- Monitored pricing integrity through exception, variance, and system-error reports and investigated discrepancies across financial systems, custodians, and market-data sources.
- Reviewed daily cash and position reconciliations and processed corporate actions to maintain accurate, timely portfolio and security information.
- Managed voluntary corporate-action responses across more than 100 funds and calculated valuation estimates for non-daily-valued investment funds using index returns.
- Produced operational reporting and supported process-improvement initiatives focused on data integrity, operational quality, and workflow efficiency.

SELECTED ANALYTICS PROJECTS

Insider Transaction & Market Data Analytics Platform

- Built a Python- and SQLite-based data platform integrating insider transaction information with historical market pricing data for hundreds of publicly traded securities.
- Developed automated ingestion, validation, and exception-analysis processes to identify missing observations, pricing anomalies, ticker changes, and other security lifecycle events.
- Investigated discrepancies across multiple data sources and developed logic to distinguish genuine missing data from identifier changes and corporate actions.
- Designed relational data structures that support historical analysis while preserving security and identifier relationships over time.

Investment & Portfolio Analytics Tools

- Developed Python and R applications for historical return analysis, dollar-cost-averaging analysis, portfolio evaluation, and automated financial-data processing.
- Integrated external financial data sources and created reporting and visualization tools to analyze financial outcomes and communicate results.
